Date of Induction	_____
Supervisor / Site Representative	_____
Worker Name	_____
Job Title / Trade	_____
Company / Contractor	TACTIVO TECHNOLOGIES
Contact Number	_____
Previous Safety Training / Competency	_____
Emergency Contact	_____

3. COMPANY HEALTH & SAFETY REQUIREMENTS

- Follow all site rules, client requirements, risk assessments, method statements and toolbox talks.
- Do not start work unless you are inducted, competent and authorized for the task.
- Report unsafe acts, unsafe conditions, near misses, injuries, property damage and environmental incidents immediately.
- Stop work and inform the supervisor when an uncontrolled or unfamiliar hazard is identified.
- Never remove, bypass or interfere with safety guards, barriers, warning signs or electrical protection.
- Maintain good housekeeping and keep access routes, fire exits and work areas clear.

4. CCTV INSTALLATION HAZARDS & CONTROLS

Working at height: Use approved ladders, scaffold or work platforms. Inspect access equipment before use. Maintain three points of contact on ladders and use fall protection where required.

Electrical hazards: Isolate power before working on electrical circuits where applicable. Use competent persons for electrical work. Treat electrical systems as live until confirmed isolated.

Drilling and fixing: Check for concealed electrical cables, pipes and other services before drilling. Use suitable tools and eye protection.

Power tools: Inspect tools, leads and guards before use. Use the correct tool and keep hands away from moving parts.

Falling objects: Barricade areas below overhead work. Secure tools and materials. Do not leave equipment where it can fall.

Dust and noise: Use suitable eye/respiratory/hearing protection where the task requires it and control dust at source.

Manual handling: Assess loads, use correct lifting techniques and request assistance for heavy or awkward equipment.

Vehicle and pedestrian movement: Follow site traffic controls, use designated walkways and wear high-visibility clothing where required.

Weather/environment: Stop or modify outdoor work during unsafe weather conditions, poor visibility or other environmental hazards.

5. REQUIRED PPE

Minimum PPE shall be determined by the site risk assessment. Typical CCTV installation PPE includes safety helmet, safety footwear, high-visibility vest, safety glasses, suitable gloves and task-specific fall protection/hearing/respiratory protection.

6. TOOLS & EQUIPMENT CHECK

Before use, inspect ladders, drills, test equipment, extension leads, hand tools, cable reels and other equipment. Defective equipment must be tagged/removed from service and reported to the supervisor.

7. EMERGENCY & FIRST AID

Workers must know the location of the nearest emergency exit, assembly point, first-aid kit, fire extinguishers and emergency contacts before starting work. Report every injury, however minor, to the supervisor/Health and Safety Manager.

8. INCIDENT / NEAR-MISS REPORTING

All incidents, near misses, unsafe acts and unsafe conditions must be reported promptly. Workers will not be penalized for raising a genuine safety concern in good faith.

9. WORKER RESPONSIBILITIES

Attend required inductions and toolbox talks; use PPE correctly; follow safe work procedures; keep the work area tidy; protect client property; do not work under the influence of alcohol or drugs; and cooperate with supervisors and site safety requirements.

10. INDUCTION DECLARATION

I confirm that the above site induction has been explained to me. I understand the hazards and controls relevant to CCTV installation work, the PPE requirements, emergency arrangements and my responsibility to work safely. I understand that I must ask my supervisor if I do not understand a safety requirement.

11. INDUCTION ATTENDANCE & SIGN-OFF REGISTER

Each worker must sign after the induction has been completed and understood.

No.	Name & Surname	Job Title	Date	Signature	Trainer / Supervisor Initial
